

## DROPS Surveys

Dropped Objects are among the Top 10 Causes of Fatality and Serious Injury within the Oil and Gas Industry.

Even the  
smallest  
object falling  
from height  
can be...  
...lethal

[www.derricksl.com](http://www.derricksl.com)

**DSL** has been providing Dropped Object Surveys and associated support services, including Derrick and Mast API Inspections to the Oil & Gas Industry worldwide, since, and before the DROPS initiative was first launched.

Active members of this Industry wide initiative, **DSL** are focused on preventing dropped objects, working towards achieving the ultimate goal of delivering a second nature dropped objects strategy across the industry.

## Depth of Service

**DSL** surveys have developed to ensure all relevant areas are covered for the client, and will cover the whole installation as the industry takes further safety steps to reduce risk. **DSL** offer one of the most comprehensive services available.

A full survey typically covers, but is not limited to, the following areas and **DSL** will tailor surveys to suit client requirements:

- **Derricks & Masts**
- **Travel/PH Equipment**
- **Communications Mast**
- **Substructure**
- **Jack House & Legs**
- **Rig Equipment**
- **Moon Pool / Texas Deck**
- **Deck & Gantry Cranes**
- **Leg Columns**
- **Flare Stacks**
- **Helideck Structure**
- **Internal areas**

## DSL DROPS Reporting Formats

**DSL** will provide a detailed report listing information on any issue found and the report will clarify if the issue was resolved during the survey. Every item will be backed up with photographic evidence.

**DSL** will also provide a separate document which will highlight outstanding faults, and how often these should be inspected to ensure any specific issue does not deteriorate to an unsafe condition until it can be addressed.

When all items on the initial report have been addressed, only then will the report be checked off and closed out.

Should a client require **DSL** report format converted to match their system, this is a simple process. **DSL** have created an inspection application which can be easily changed and amended to suit.

## DSL DROPS Management System

If a client requires a Dropped Objects management system incorporated within their organisation, **DSL** can provide this service, or **DSL** can simply audit any existing system in place and, suggest recommendations to enhance an existing system. Additionally **DSL** can create an online interactive service which allows you to access to your specific installation reports where items can be amended as and when they are addressed.

**DSL** will provide the required inspection format and guidance to the rig crew to enable them to make periodical inspections in-between each **DSL** inspection.

**DSL** are committed to DROPS prevention and are determined to help in making a difference. Through established training and experience in the field, our inspection teams are committed to improving safety and to eradicating the menace of dropped objects.

For more information on the DROPS service **DSL** can provide please contact our head office in the UK:
